Meeting Renault's technical demands

Hosted MQ server over ENX solution

ADAMPOL SA

Overview

Adampol S.A. supplies vehicle parts and accessories to motor manufacturers. The company wanted to strengthen its strategic trading relationship with Renault Logistics who they had identified as a valuable customer.

Renault Logistics requires its suppliers to connect to its network through an MQ server and the automotive industry's ENX network. This ensures a high degree of security and reliability. Adampol therefore needed to find a way to meet this technical requirement.

Adampol chose DiNet and the hosted IBM MQ server solution from Data Interchange. Together these services match Renault's challenging technical requirements perfectly and provide an efficient trading environment for Adampol's customers.

The key benefit of the solution is that it is fully hosted. This meant that Adampol was able to exchange messages and data with Renault Logistics without purchasing costly on premise software which would have required complicated IT implementation.

Adampol achieved its goal of becoming an official supplier to Renault Logistics.

But this was not all; there were broader business benefits as well. DiNet and the hosted MQ server solution brought greater efficiencies and competitive advantage for Adampol. This enhanced Adampol's customer experience.

Approach

First step: The first step towards meeting Renault's technical requirement was to find a way to export Adampol's data files in a format that matched Renault's specification. As Data Interchange has done this for many other automotive industry suppliers, it was not difficult to achieve.

Conclusion

With the new solution, data files arrive via DiNet, and Data Interchange makes the hosted ENX connection to Renault Logistics through its own IBM MQ server and the global DiNet Integration Network.

Adampol can monitor exactly what is happening on the network. They use DiNet's dashboard to view their data and files in real time, with 24/7 access.

There are no interruptions in the transactions – the data is always transferred immediately. The hosted system allows Adampol to create all the reports they require, and provides alerts for messages and queries.

"Data Interchange's flexibility, professionalism and comprehensive approach combined with their extensive experience resulted in a solution that fully met our expectations."

Marek Rogalewski, Director of the IT Department, Adampol S.A.
